

Service Description

Qteq specialises in the design of customised Disaster Mitigation & Alert systems, purpose-built at our facility to suit your exacting requirements.

Cost effective, flexible, and constructed to meet or exceed industry best practice, our instrumentation and controls team will ensure that your system is what you need.

Through our extensive experience working with all levels of Government, local Authorities and with various resource sectors and industries, we are perfectly placed to help design your project to ensure it is scalable and integrates seamlessly with any existing infrastructure.

We can perform a full in-field assessment of the area and assets to be protected and surveyed, following which we will be able to provide relevant options within your assigned budget.

Typical systems that we provide include:

- Flood Early Warning Systems
- Flooded Road Warning Systems
- Remote Camera Monitoring Systems
- Public Warning and Alert Systems
- Surface Water Monitoring and Automated Sampling Stations
- Ground Water Monitoring and Sampling Stations
- Automated Weather Stations
- Soil Moisture Monitoring Networks

Additional options are available on request.

In addition to supply, installation and commissioning of your Sentinel systems, we can also cater to your data management, processing, analysis and visualisation needs, as well as your alert notification requirements.
